

**Preliminary assessment of Shelterbelt Research Programmes  
Falkland Islands  
2007**

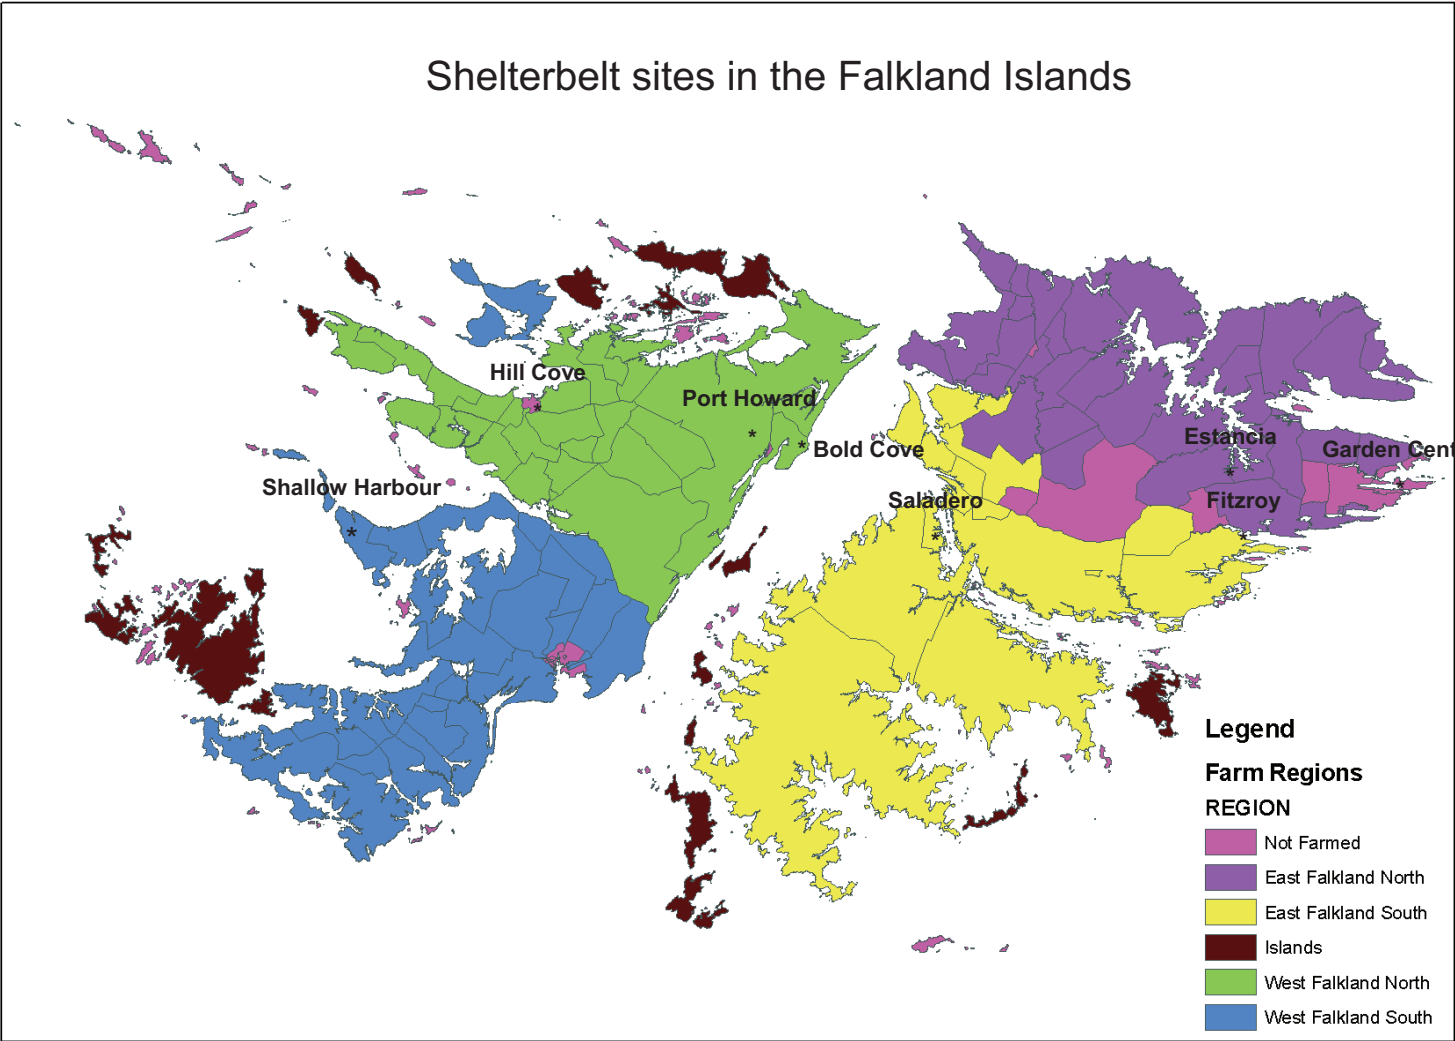

**Rodrigo Olave**

**United Kingdom Falkland Islands Trust (UKFIT)  
Department of Agriculture (DoA)  
Agri-Food & Biosciences Institute (AFBI)**

## Agriculture programmes in the Falkland Islands (DoA)

- Business skills development
- ***Wool & meat development (ET/AI – PIP)***
- Fish, animal and plant health
- Biosecurity strategy

Shelterbelt sites in the Falkland Islands

# Performance of a shelterbelt

Tree growth – Meteorological conditions – Ground factors

Tree height  
Stem diameter (at 20 cm from ground level) and DBH (Hill Cove)  
Survival  
Tree health (needle/leaf loss - degree of yellowing)  
Foliar analysis (Nutrient status & interpretative criteria for Lodgepole pine)  
Soil analysis (Phosphorus generally low – other macro & micronutrients)

To make an efficient impact on the whole farm system without  
covering large areas in trees.

### **Hill Cove**

Date of planting: 1925

Mean height: 16.6m

Species: Sitka spruce

## **UKFIT**

### **Fitzroy/Garden Centre**

Date of planting: 1990

Mean height: 3.8m

Species: Lodgepole pine/Sitka spruce

## **DoA**

### **Saladero**

Date of planting: 1998

Mean height: 2.3m

Species: Lodgepole  
pine/Macrocarpa/Radiata pine/Austrian  
pine/southern beech

## Estancia

Date of planting: 1998

Mean height: 2.10m

## Shallow Harbour

Date of planting: 1997

Mean height: 2.70m

## Bold Cove

Date of planting: 1999

Mean height: 1.65m

## Port Howard

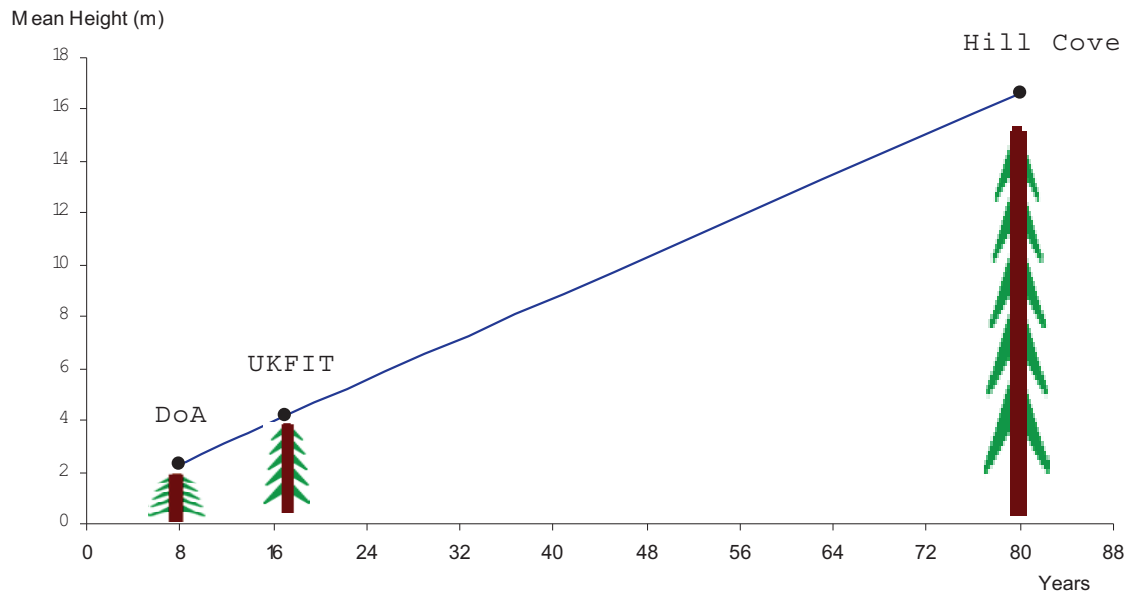

Date of planting: 1999

Mean height: 1.6m

# Mean height of shelterbelts in the Falkland Islands / 2007

# Speeding up the growth of Shelterbelts

- Correct species choice/testing (Tall grasses, shrubs & trees etc.)
- Local & high quality plant propagation (**Implementation of enhanced skills**)
- Mycorrhizas (Improve nutrient uptake)
- Site selection (strategically and using GIS tools)
- Pre planting weed control
- Post planting weed control
- Ground preparation
- Fertilisation
- Fencing and plant protection
- Top technical supervision

# Outputs of this research

- Cost/Benefit Analysis (NPV – ROR)
- Shelterbelt growth model

## Future research needs

- Testing & Propagation - domestication of other species
  - Grazing & Pasture growth in the lee of a shelterbelt
    - Lamb survival
      - Sheep losses and recovery after shearing
- Environmental effects (exotic species, landscape)

**ET/AI Programme**

**Shelterbelt Programme**

Improved wool  
Sheep selection  
Managed grazing  
Forage Crops  
More lambs  
Growth rates  
Healthy sheep  
Environment

**Pasture Improvement Programme**

**Wool and Meat development**  
**Higher incomes to farms**  
**Greater revenue to the islands**

Many Thanks
